1. General

This release note applies to the IP firmware version 06-506A of the KWS1500 that has been tested compatible with the CUCM 6.1 using the SCCP.

This release is a main release which is the latest generally available (GA) release.

2. Important Notes

2.1 *Removal of user data*

If a user is removed in the CUCM (user data deleted), but not removed from the KWS1500 registration attempts are sent to the CUCM.

This means that the user data removed from the CUCM shall always be removed from the KWS1500. If not, it will produce unnecessary signaling.

2.2 *SRST*

This firmware supports SRST 4.0 and upwards. SRST 3x and lower is not supported.

2.3 *Conference*

If the conference manager leaves the conference, and two conference participants continue to be connected, one way voice can appear. Leave the conference when the conference manager leaves, and make a new call.

3. Distribution Files

Click [here >>](#) to find the IP firmware 06-506A

4. Changes

4.1 *CUCM 6.1 (Q4/2008)*

None

4.1.1 **Added or Changed Features**

4.1.2 **Removed Features**

None

4.1.3 **Configuration File Parameter Changes**

None
